Outer membrane protein B precursor (168 kDa surface-layer protein)

(Surface protein antigen) (Cell surface antigen 5) (Sca5) (rOmpB)

(TOMP B) [Contains: 120 kDa surface-exposed protein (Surface protein antigen) (120 kDa outer membrane protein ompB); 32 kDa beta peptide].
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MEDLINE-91045972; PubMed=2122457; Carl M., Dasch G.A.; Carl M., Dobson M.E., Ching W.M., Dasch G.A.; Carl M., Dobson M.E., Ching W.M., Dasch G.A.; Ching the protective paracrystalline-surface-layer protein of Rickettsia prowazekii: presence of a truncated identical homolog in Rickettsia typhi."; Proc. Jr., Peacock M.G.;
"Evidence for proteolytic Cleblak W. Jr., Peacock M.G.;
"Evidence for proteolytic Clebavage of the 120-kilodalton outer membrane protein of rickettsiae: identification of an avirulent mutant deficient in processing.";

In Function: THE 120 kDa SURFACE-EXPOSED PROTEIN IS A MAJOR STROTURENE PROTEIN WHICH MAY PLAY A ROLE AS A RICKETISIAL VIRULENCE FACTOR AND/OR IMMUNGEN DURING INFECTION.

I- FUNCTION: THE 32 kDa BETA PEPPIDE MAY SERVE AS A MEMBRANE ANCHOR.

I- SUBCELLULAR LOCATION: CELL WALL. THIS BACTERIUM IS COVERED BY A S-LAVER WITH HEXAGONAL SYMMETRY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TTOEAPLTICA -> INSRSSSYHLVS (IN REF. 1).

Pred. No is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
